The purpose of the Steel Pipe Basic Education Course is to introduce the attendee into the world of steel pipe by offering an overview of its uses and distinct language, production and certification, value added products and its final distribution concepts and methods. The purpose of the OCTG Specialty Education Course is to give the attendee an understanding of the basic market dynamics, standard and customer requirements vs technology and supplier limitations by relating form to function through API standardized terminology associated with oil and gas exploration and production.

The Steel Pipe Basic Education Course qualifies for 10.0 Professional Development hours and the OCTG Specialty Education Course qualifies for 6.75 hours. Both classes are taught in a classroom environment.

Business practices and ethics are included in the courses. The last revision date is September 2017.

Industry experts created the content based on the things steel pipe distributors need to perform their jobs effectively. A survey is taken following each session to confirm the information was taught in an effective manner.

A test is taken at the end of the course to assess the understanding and absorption of the content presented.
